

Top 7 Benefits of an Enterprise-Class Hybrid Cloud for Government

VMware vCloud® Government Service provided by Carpathia® is an enterprise-class hybrid cloud service that delivers the tried and tested VMware capabilities widely used by government organizations today, with the added security and compliance assurance of FedRAMP authorization. The hybrid cloud is becoming more and more prevalent – in fact, nearly three-fourths of large enterprises expect to have hybrid deployments by 2015.*

Let's take a look at the benefits of this hybrid cloud service.

1. Get the broadest application and infrastructure support.

vCloud Government Service supports thousands of applications and dozens of operating systems that are certified to run on vSphere®, so no changes are required to run your legacy applications in the cloud and there are no new tools or processes to learn for deploying new applications.

2. Go live faster. • Much faster.

Accelerate your time to value with vCloud Government Service. Its vSphere foundation allows for use of a common platform to leverage internal and external cloud services, without the added task of having to relearn skills and rewrite applications.

3. Extend your virtual network and get support from the partners you trust.

VMware's extensive ecosystem of Federal Systems Integrator and solution provider partners enables government agencies to leverage the same trusted partners they already rely on to navigate their journey to the cloud.

4. Get security, availability and performance from the platform you know and trust.

vCloud Government Service enables customers to maintain security and data protection that meets a broad range of regulations, standards and best practices including FedRAMP authorization.

5. Keep costs— and risks—low.

Leverage existing investments in applications and infrastructure and avoid the complexity of having to rewrite applications to work on a public infrastructure. Trusted technology and trusted partners are key to reducing risk and maximizing existing investments.

6. Stay confident about security and compliance.

vCloud Government Service was built specifically to meet and maintain government's unique security and compliance requirements.

7. Go ahead, grow all you like.

vCloud Government Service is housed in Carpathia's flagship 64,000 sq. ft., 5.8 MW IBX Vault Data Center in Dulles, VA. The IBX Vault allows for expansive growth and was purpose-built to meet the highest standards in physical and network security for government agencies, using its industry-leading defense-in-depth security controls.
